PROFESSIONAL SUMMARY

Systems-focused Network Support Executive with a B.Tech in Computer Science (Artificial Intelligence). Combines hands-on experience in enterprise networking, telemetry monitoring, alert triage, and incident management with a strong background in Linux administration, Python scripting, and cloud security labs. Experienced in executing playbook-guided triage, diagnosing infrastructure anomalies, writing clear technical asset documentation, and delivering reliable L1/L2 escalation support via ServiceNow.

EDUCATION

Madanapalle Institute of Technology and Science | Angallu

Bachelor of Technology in Computer Science Engineering (Artificial Intelligence) | Dec 2021 - May 2025

PROFESSIONAL EXPERIENCE

Ibus Technologies Private Limited | Network Support Executive| Bangalore | Dec 2025 – Present

- **Alert Monitoring & Triage:** Monitor continuous security alert queues across shifts using playbooks to perform initial triage, alert classification, and false positive determination while ensuring high-quality shift handoff documentation.
- **L1/L2 Troubleshooting:** Perform independent troubleshooting on core routing protocols (BGP, OSPF) and network services (DNS, DHCP, RADIUS) via Linux command-line tools.
- **Incident Lifecycle & ITSM:** Manage incident response lifecycles using Manage Engine for ticket creation, classification, and SLA-bound documentation, streamlining Tier 3 engineering escalations while triaging threats like phishing, malware, and credential abuse.
- **Security & Reliability Assurance:** Validate IPSec/GRE VPN tunnels, firewall ACLs, and VLAN segmentation to ensure security baselines and uptime SLAs.

SKILLS

Systems Monitoring & Alert Triage: Alert Queue Monitoring, Initial Disposition, ServiceNow (ITSM), Playbook & Runbook Execution, Shift Handoff Quality, Root-Cause Analysis.

Cloud & Security Analytics: Microsoft Sentinel (KQL), Microsoft Defender for Endpoint (MDE/EDR), ReliaQuest GreyMatter Exposure, Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), SIEM, MITRE ATT&CK Framework, Email Security & Phishing Analysis (Mimecast/Abnormal.ai exposure).

Operating Systems & Infrastructure: Linux (Ubuntu/Debian, Fedora), Command-Line Administration, Bash Scripting, Systems Design & Reliability.

Networking & Protocols: TCP/IP, BGP, OSPF, DNS, DHCP, HTTP/S, RADIUS, IPSec/GRE VPN, Zscaler/Netskope (SSE/SWG Concepts), Snort IDS, pfSense, Packet Analysis (Wireshark).

Programming & Automation: Python, SQL, Bash, Java, C.

ACHIEVEMENTS

Published research paper titled *"Real Time Car Accident Detection and Emergency Response Using Enhanced YOLO"* at the 5th EAI International Conference on Cognitive Computing (ICCSSAS 2025).

PROJECTS / OPEN-SOURCE

Hybrid Virtual Security Operations Center (vSOC) & Network Monitoring Lab | (Networking)

- Designed and deployed a multi-tier virtualized system environment to simulate operational stress, physical forms, and defensive monitoring. Implemented pfSense for network segmentation and integrated an ELK Stack via Security Onion to ingest telemetry and ensure system reliability.

Virtual SOC & Network Telemetry Monitor | (Tech Stack: Python, Bash, Windows Event Logs, Wireshark)

- Developed automated script parsers to analyze Windows Security Event Logs (Event IDs 4624, 4625, 4688) mapped to the MITRE ATT&CK framework. Correlated endpoint telemetry alongside simulated Microsoft Defender for Endpoint (MDE) process trees and Microsoft Sentinel KQL log analysis queries to detect credential abuse and malicious scripting.

Real Time Car Accident Detection and Emergency Response Using Enhanced YOLO | (Python)

- Developed an automated real-time accident detection and emergency alert pipeline using an Enhanced YOLO deep learning model trained on traffic video telemetry to detect collisions and initiate instant response notifications.

Cloud Security Monitoring & Threat Detection Lab | (Tech Stack: AWS CloudTrail, Amazon GuardDuty, IAM)

- Implemented a cloud-based monitoring environment to establish real-time operational visibility, capturing API activity logs and running automated threat analyses.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate – Google Skills
- CCNAv7: Enterprise Networking, Security, and Automation – Cisco
- CompTIA Security+ (Actively Pursuing)
- Microsoft SC-900 / SC-200 — (In Preparation)
- Splunk - Data and Tools for Defense Analysts
- School of AI Certified Cloud Practitioner (Foundational)
- Python – Coding Ninjas
- Java – Simplilearn
